Dear Jaclyn,

Thank you for contacting me again regarding your coastal pool project at 921 Soundview Drive.

In regard to the chemical makeup of a pool using a salt water chlorine generator:

- The pool water will still be chlorinated pool water because chlorine is produced from the salt. However, the pool will use less chlorine generally because it is controlled and dosed on an as-needed basis by the salt system. This also typically translates to a lower level of chlorine in the water.
- Further, there would be no need for storing of manufactured chlorine product on site.
- Additionally, these pools would have less need for algaecide.

If I can provide additional information or be of help in any other way, please do not hesitate to contact me.

Sincerely,

James Scott
